                                                                                                                                                                                                                                         문
                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method for the early detection of mycobacterial disease or infection in a subject. The method comprises assaying a biological fluid sample from a subject having symptoms of active tuberculosis for the presence of early antibodies specific for one or more early Mycobacterium tuberculosis antigens. The invention further relates to: a kit for early detection of M. tuberculosis disease; and an antigenic composition for early detection of the M. tuberculosis disease or infection. The compositions of the invention have antibacterial activity. The method is useful for early detection of mycobacterial
   Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease or infection in a subject and for preparing a vaccine against M. tuberculosis infection. This sequence represents the protein derived fro the gene RV3167 relating to the mycobacterial disease or infection detection method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Barly detection of mycobacterial infection in a subject by assaying a biological fluid sample from a subject having symptoms of active tuberculosis for the presence of early antibodies for early Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-JUN-2001; 2001WO-US020545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-SEP-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mycobacterial disease; infection; tuberculosis; antigenic; antibacterial; vaccine; Rv3367.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-JUN-2001; 2001WO-US020545

RESULT 13
AEB91453
CC identifying adhesin and adhesin-like proteins, by computing the sequence computed network software, training an artificial neural network (ANN) for ceach of the computed five attributes, and identifying the adhesin and computed five attributes, and identifying the adhesin and ceach of the computed five attributes, and identifying the adhesin and ceach of the computed five attributes, and identifying the adhesin and ceach of the computed five attributes, and identifying the adhesin and ceach of the computed five attributes, and identifying the adhesin and ceach of the computed five attributes, and identifying the adhesin and ceach of ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical ceach of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base ceach of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully connected multilayer feed forward ANN (I) based on (MI). (MI) is useful for identifying adhesin and adhesin-like proteins, of therapeutic potential, and identifying and short-listing ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin and adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypothetical adhesin-like ceach of 105 hypotheti
                                                                        distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 algorithm; adhesin; pharmaceutical; vaccine; drug screening; bordetella pertussis infection; antibacterial; pneumonia; antiinflammatory; respiratory-gen.; gastric ulcer; antiulcer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-FEB-2004; 2004IN-DE000173.

The invention relates to a substantially pure polypeptide comprising an acid sequence selected from Rv0284, Rv0285, Rv0455c, Rv0569, CC Rv1195, Rv1386, Rv3477, Rv3878, Rv3879c or MT3106.1 (also disclosed are CRV1195, Rv1386, Rv0284ct), or their immunogenic portion, nucleic acids encoding them and an amino acid sequence analogue having at least 70% cc sequence identity to the polypeptide and is immunogenic. The protein is useful in preparing a pharmaceutical composition for diagnosting cutberculosis and in preparing a vaccine against tuberculosis caused by virulent mycobacterium, or therapeutically in a subject not infected with a virulent mycobacterium, or therapeutically in a subject not infected with a virulent mycobacterium. The protein is useful for preventing, composition and detecting infections caused by species of tuberculosis may be used for effecting in vivo expression of the antigen, and in a compositic assays for detecting the presence of pathogenic organisms in a sample. The vaccine is an improvement of the living BCG vaccine presently available, where one or more copies of the DNA sequence encoding one or more polypeptide has been incorporated into the genome of the composition of more than one copy of a nucleotide sequence enhances the immune response. The present sequence represents an M. cuberculosis protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S

CC identifying adhesin and adhesin-like proteins, by computing the sequence-
CC based attributes of protein sequences using five attribute modules of a
CC neural network software, training an artificial neural network (ANN) for
CC each of the computed five attributes, and identifying the adhesin and
CC edhasin-like proteins having probability of being an adhesin (Pad) as
CC equal or greater than 0.51. Also claimed is a set of 274 annotated genes
CC encoding adhesin and adhesin-like proteins, having 274 fully defined 162-
CC (1151 base pair (SEQ ID NO: 385-558) sequences; a set of 105 hypothetical
CC genes encoding adhesin and adhesin-like proteins, having 105 fully
CC defined 306-15876 base pairs (SEQ ID NO: 659-763); a set of 279 annotated
CC adhesin and adhesin-like proteins, having 205 fully defined 53-3716 base
CC pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-
CC 280-384) sequences; and a fully connected multilayer feed forward ANN (I)
CC based on (M1). (M1) is useful for identifying adhesin and adhesin-like
CC proteins, of therapseutic potential, and identifying and short-listing
CC proteins for further testing in development of new vaccine formulations
CC useful for identifying putative adhesins that are important in drug
CC discovery and preventing therapeutics for whooping cough, pneumonia,
CC gastric ulcer and urinary tract infections. (M1) identifies adhesins from

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEKMSHDPIAADIGTQVSDN......VQDVARTYSQIDDGAAGVFA
